

YOUNG PHYSIOTHERAPY EXPERT

Provide Smart And Healthy
comprehensive technological physiotherapy solutions

SCIENCE & THERAPY

About XLIJA

Stock abbreviation: SMS Electric
Stock code: (002857)

XLIJA is a global smart technology and health company. It is a high-tech enterprise focusing on the development and promotion of AI intelligent physiotherapy robots. Our mission is to provide efficient and scientific rehabilitation programs for sub-healthy people through innovative technology. Through high-tech Intelligent health services create a pleasant lifestyle for hundreds of millions of sub-healthy people in China and improve the quality of human life.

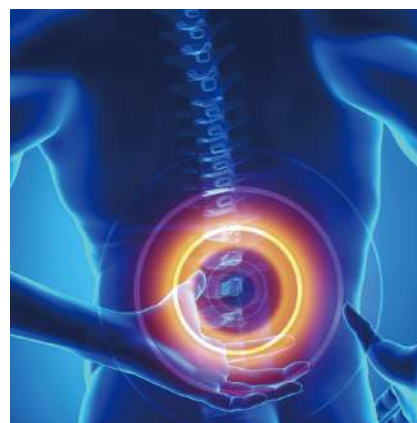

Technological Power

Committed to continuous innovation of industry-leading technologies, leading changes and creating value for users

Effects Driven

Committed to exploring the effective integration of international cutting-edge physical therapy solutions and robots to bring users a pleasant and healthy

Satisfactory Service

Redefine services to provide users with a full pleasant experience and improve user satisfaction

Accelerating China's Health Industry's Transit On To Sustainable Energy

The big health industry is based on the division of labor in the era, using the most cutting-edge technology to free your hands and achieve customer satisfaction.

Guangzhou Robot R&D Base

Mainly used in robot production & manufacturing

Hefei AI Digital R&D Base

Main operating system development

Shandong Robot Operation Center

Mainly used for nationwide investment promotion and franchising

HONORARY QUALIFICATIONS

Will become the mainstream of comprehensive health services

Xiaolijia's brand image and outstanding achievements are confirmed by its professional and reliable intelligent technology physiotherapy technology and sub-health management services, its employees' sincere hospitality and outstanding brand building capabilities.

KEY TECHNOLOGIES OF XLIJA PHYSIOTHERAPY ROBOT

We are committed to developing innovative technologies to provide advanced solutions for smarter rehabilitation therapy.

Xiaolijia participated in the Hong Kong International Innovation and Invention Competition and won the Asian Innovation and Invention Gold Award. AI intelligent physiotherapy has replaced traditional manual physiotherapy and has been recognized by the world.

Key Technology

✓ Visual Recognition And Analysis Algorithms

The robot's 4 joints integrate 3D cameras to conduct comprehensive modeling of the massage parts, independently plan the massage path, and realize the spiral trajectory of simulated manual massage.

✓ Motion Control Technology

Processing the physical therapy trajectory, the flexible robot arm can move stably and smoothly

✓ Flexible Control And Precise Force Control

A force sensor is integrated at the end of the collaborative robot to accurately control the force exerted during physical therapy based on force feedback data and algorithms.

✓ Safety

Multiple safety protection and active avoidance: use limit technology and safety algorithm sensing technology to set a safe range and set up emergency protection systems and devices

XLIJA ARE THREE STEPS

Xiaolijia's ARE three-step program is a comprehensive health management program designed specifically for those experiencing sub-health conditions. We've assembled a professional health team, leveraging their extensive experience and sophisticated skills to provide each client with precise examinations and assessments. Based on this, we offer personalized conditioning and maintenance plans designed to alleviate sub-health conditions. At the same time, we strengthen maintenance measures to ensure long-term health. Throughout the entire process, we maintain a customer-centric approach, customizing comprehensive, personalized plans to address both the symptoms and the root causes, allowing you to regain health and vitality.

1

Analyse

Through professional examination and evaluation of the body's sub-health status, we can accurately analyze the causes of the sub-health status; through infrared thermometer to detect body temperature, we can customize the appropriate conditioning plan.

2

Repair

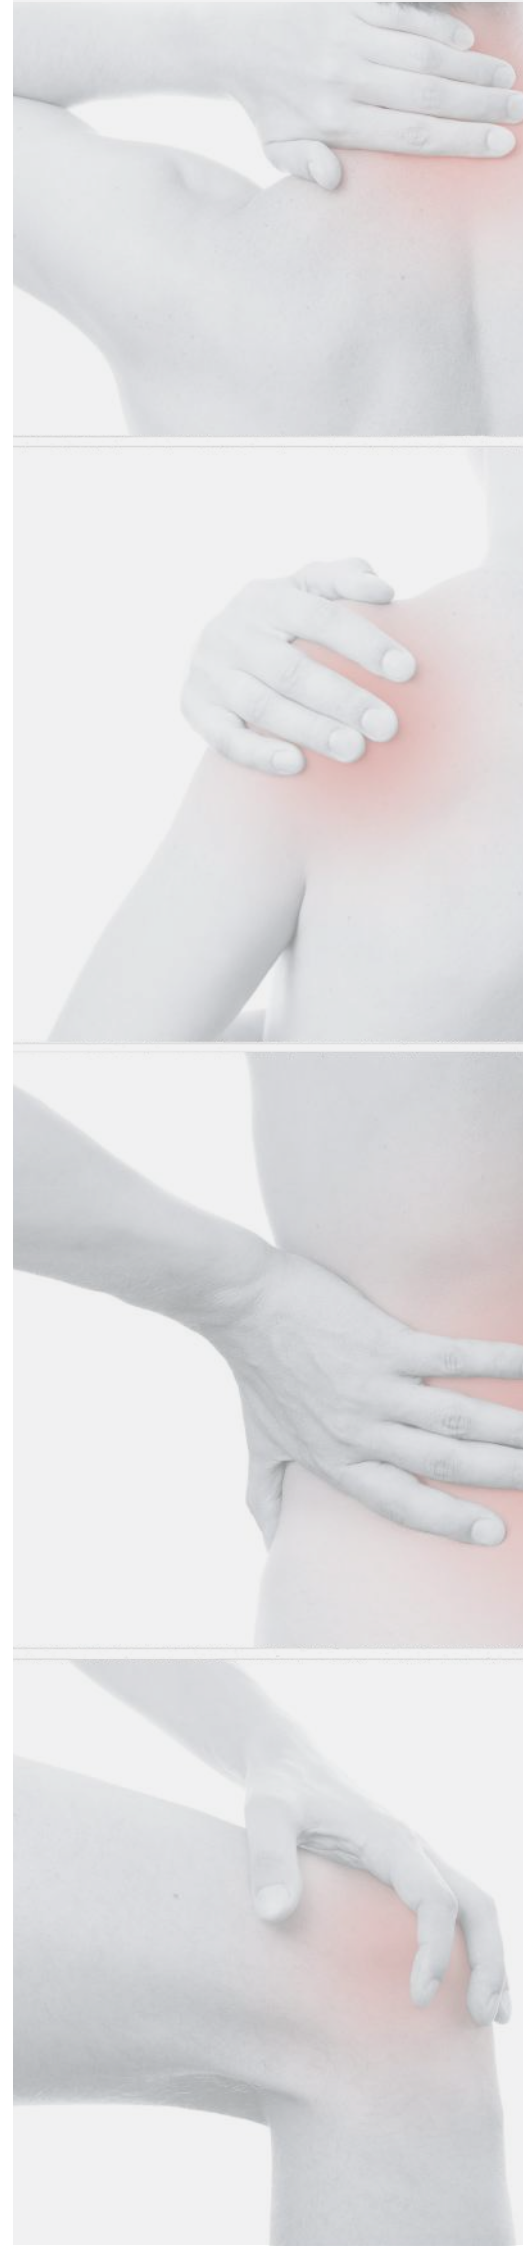

Blending Chinese and Western treatments, our unique Kang-zhen Wave conditioning technology quickly pinpoints the core pain points, relieving them from the source and providing quick treatment. Combined with the conditioning device Super Shubo to stimulate repair, and combined with Xiaolijia biological products, we achieve a truly restorative effect!

3

Enforce

Combining Western techniques with the traditional Chinese philosophy of "inner maintenance, outer strengthening," this treatment utilizes conditioning equipment, supplementary massage techniques, and stretching to strengthen tendons. Chinese herbal extracts gently nourish the body.

VISIBLE RESULTS

EFFECT

Xiaolijia is dedicated to addressing six major sub-health issues.

SORENESS

BLOATING

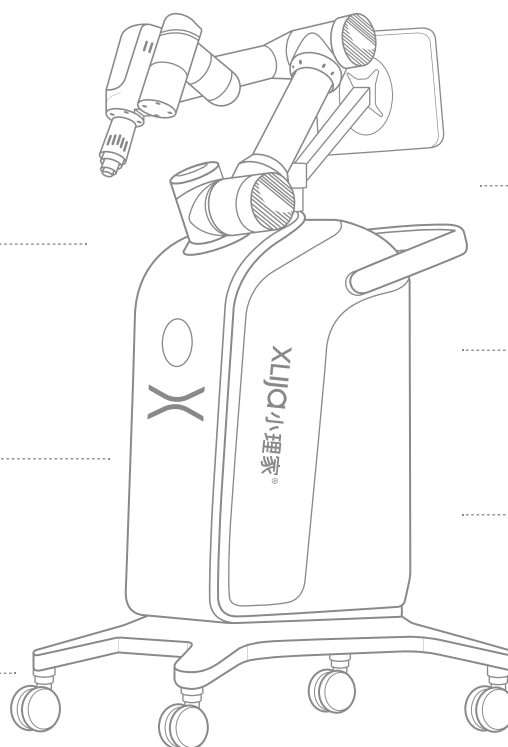

NUMBNESS

CONGESTION

SWELLING

BLOCKAGE

COLDNESS

TECHNOLOGICAL PHYSIOTHERAPY USES A 4:2:4 CARE PLAN

40%

TECHNOLOGY CONDITIONING EQUIPMENT

Through professional assessment, inspection, and evaluation of sub-health conditions, we accurately analyze the causes of sub-health conditions. Using infrared thermometers to measure body temperature, we can customize appropriate health and wellness plans. Using internationally advanced health wave and super comfort wave technologies, we help people with sub-health conditions recover to a healthy state.

20%

CHINESE HEALTH CARE TECHNIQUES

Xiaolijia utilizes traditional Chinese health and wellness methods, eschewing traditional medications in favor of physical principles and methods to assess, regulate, and address various types of blockages and dampness. Physical therapy, with its non-invasive, non-drug-based properties, offers a safe and effective path to wellness for those experiencing sub-health conditions.

40%

TECHNOLOGY RECYCLED PRODUCTS

Xiaolijia uses supramolecular science and technology research, and its scientific research team, led by a number of high-level overseas scientists, uses supramolecular nano-encapsulation technology to encapsulate active ingredients into designed delivery vehicles, allowing the product to be delivered in a targeted manner. The raw materials processed with nanotechnology are more easily absorbed by the human body, thereby achieving cell maintenance effects.

XIAOLIJIA'S THREE CORE TECHNOLOGIES

AI

PROFESSIONAL SMART THERAPIST

Xiaolijia intelligent physiotherapy robot is developed based on in-depth and mature human body calculations. Its robotic arm can achieve all-round expansion and extension, and standardizes the nursing trajectory within the nursing area to provide the most accurate physiotherapy services for various parts of the body.

3+3

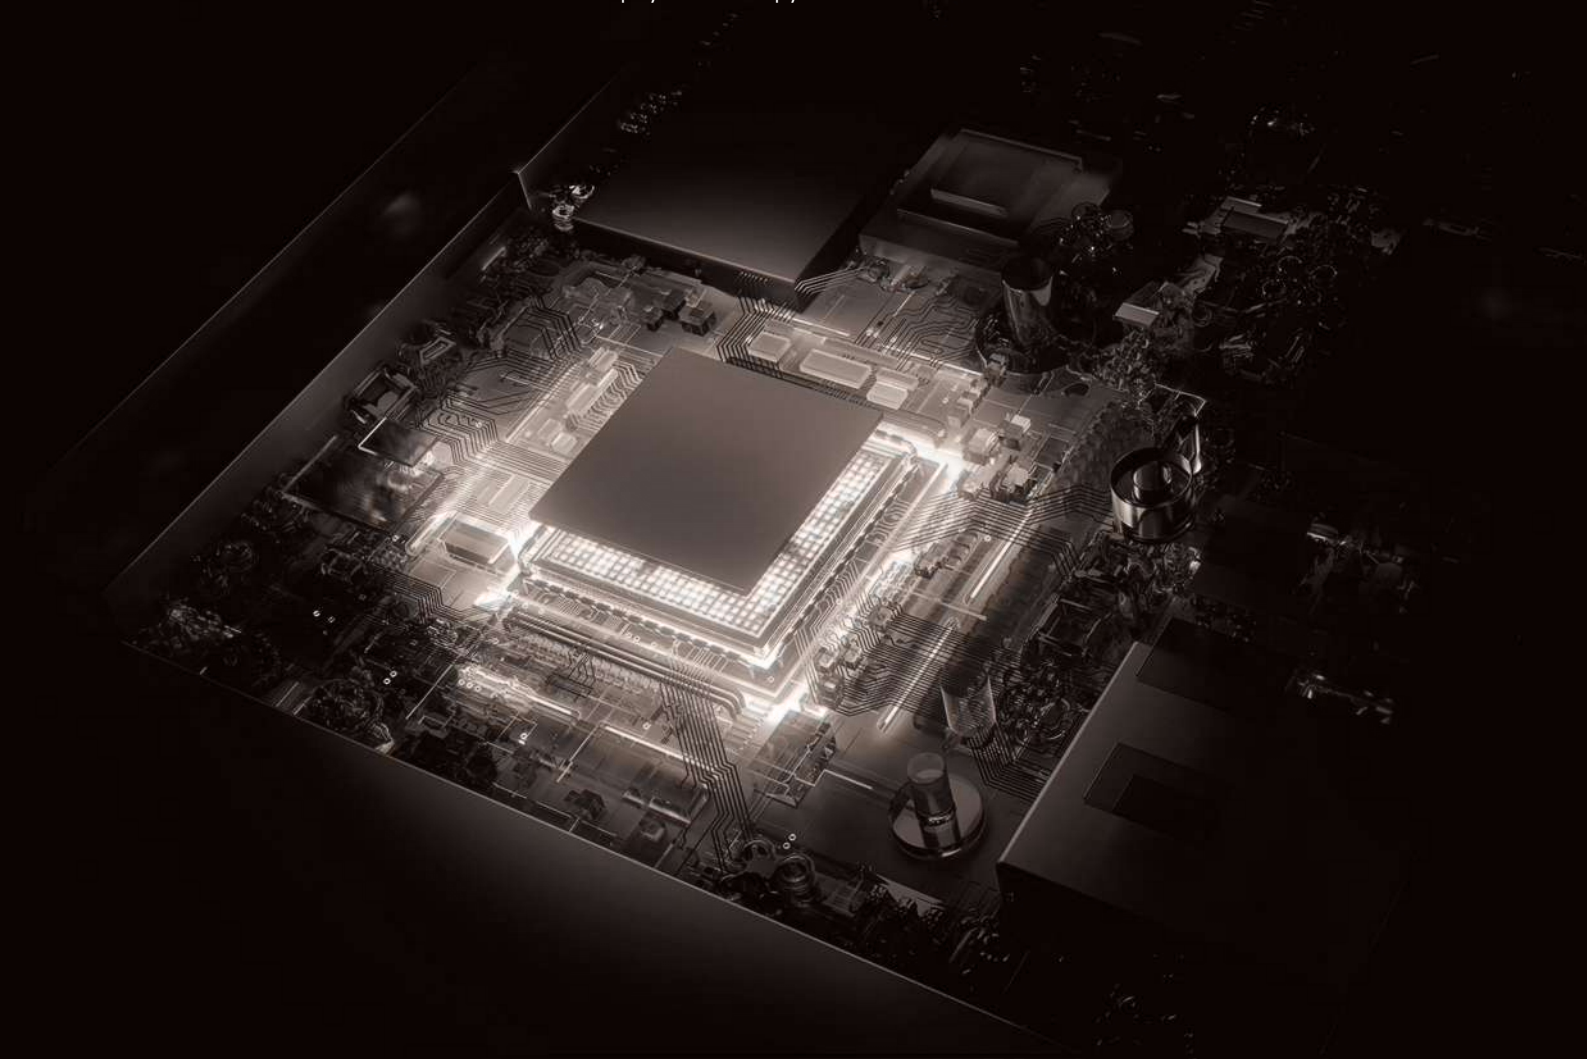

3+3 FORCE CONTROL SENSING TECHNOLOGY

Equipped with 3+3 force-controlled sensing technology, the Xiaolijia smart robot effectively extends the interactive communication between the therapist and the user. It can also sense and accurately identify the therapist's body position and posture; through precise movements, the physical therapy process becomes more comfortable and safe.

3D

3D VISION PRECISE POSITIONING

Through 3D visual cameras, the therapist's body shape, form and overall outline can be accurately identified, allowing for more precise and standardized planning and physical therapy services.

6 SMART ADVANTAGES OF XIAOLIJIA

01

TECHNOLOGY EMPOWERS CONTROL

Smart solutions, smart control
Smart IoT, smart management

02

INTELLIGENT CORE COMPUTING

Precise & precise positioning,
comfortable force control, simulates manual push and press, supports continuous improvement, & ensures safety.

03

EXCLUSIVE TECHNOLOGY R&D

Physics Technology
Innovation, professionalism,
and a focus on results

04

STANDARDIZED MODEL

This eliminates discrepancies and deficiencies associated with manual operation. A data reset function ensures each treatment is standardized.

05

PERFECT PREMIUM ENJOYMENT

Intelligent temperature control, precise force control, constant temperature and uniform heating, balanced force

06

EFFECTIVE COST CONTROL

Labor costs plummeted by 70%, order volume increased fivefold, and labor efficiency increased tenfold.

SCIENTIFIC RESEARCH PATENT ADVANTAGES

K-SHOCKWE SWELLING CARE

K-SHOCKWE Therapy is a non-invasive solution for musculoskeletal pain. External Kangzhen Wave Therapy is commonly used in physical therapy, orthopedics, and sports maintenance. Back and neck discomfort. The most common complaints include: lateral epicondyle discomfort, lower back pain, Achilles tendon soreness, and tendon discomfort.

01

Using sound waves to penetrate the epidermis to relax the adhesion of the fascia layer, relieve soreness and swelling, and increase the amount and elasticity of collagen between bones and fascia.

02

"If your tendons grow an inch, your life will be ten years longer," which means stimulating the meridians can improve your health. Kangzhenbo unclogs the meridians, enhances metabolism, and stimulates the body's microcirculation.

03

The "dong dong dong" sound of Kangzhenbo isn't the sound of impact, but rather the sound of sound waves generated by the trajectory. These sound waves stimulate the activity of stem cells in the fascia layer, enhancing ligament elasticity and joint lubrication while also providing nourishment, removing discomfort, and relieving soreness and swelling.

C-THERMALWE

COLD & DAMPNESS CARE

C-THERMALWE uses intelligent temperature control technology to improve cell function and acts on the body from the inside out. Through unique cell balancing therapy, it balances cell ion exchange, helps cells maintain their natural functions, enables the skin to regain lost elasticity, metabolizes excess fat, promotes the body's metabolism and microcirculation, increases body temperature, activates the human immune system, and maintains body vitality to achieve a healthy state.

01

High heat therapy activates enzyme substances, stimulates cell maintenance, activates the production of HSP, and breaks down fat.

02

Heat therapy increases microcirculation and vasodilation.

03

Non-thermal therapy promotes cell metabolism and the absorption and utilization of nutrients, and balances and maintains the circulation of extracellular matrix.

MOXIBUSTION COLDNESS CARE

Combining intelligent technology with the essence of ancient moxibustion, we leverage intelligent recognition technology to tailor a full-cycle moxibustion therapy plan for you. Precisely control moxibustion techniques, covering acupuncture points throughout the body, for a personalized, professional moxibustion experience. Whether for daily health or specialized conditioning, we offer comprehensive moxibustion services that are easy to use, safe, and comfortable.

01

Combining modern technology with ancient moxibustion methods, it provides personalized treatment plans through intelligent identification to achieve full-cycle health management.

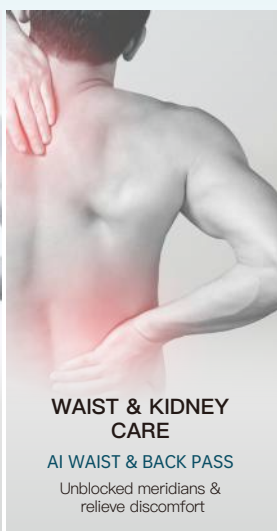

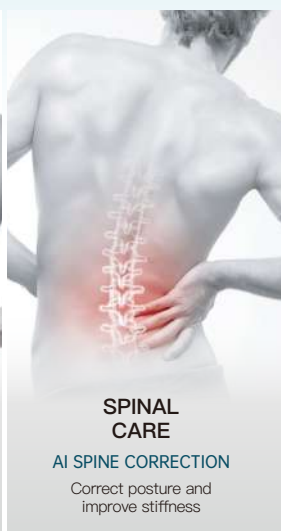

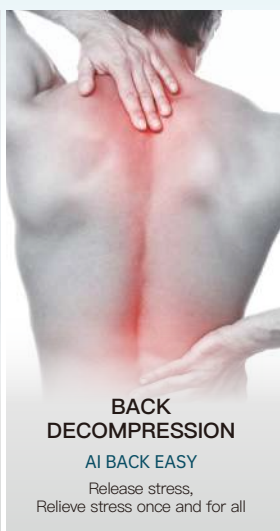

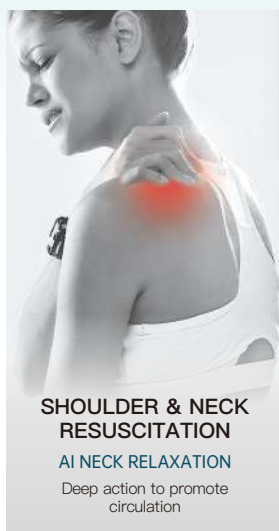

02

Covering acupuncture points all over the body, the treatment is more precise for different body levels

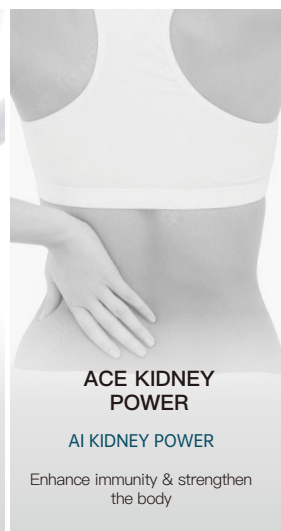

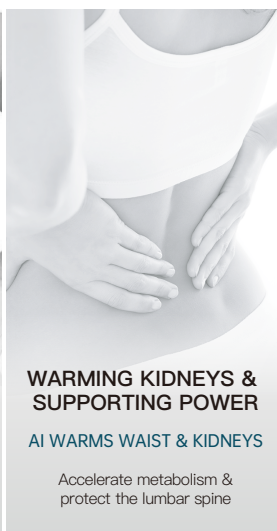

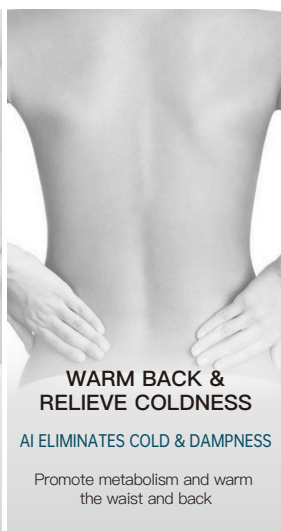

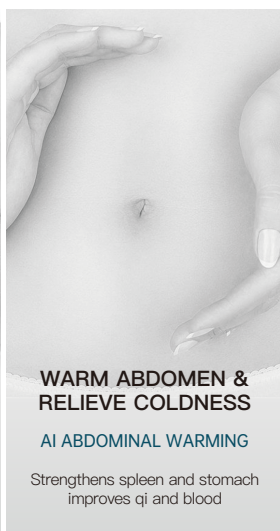

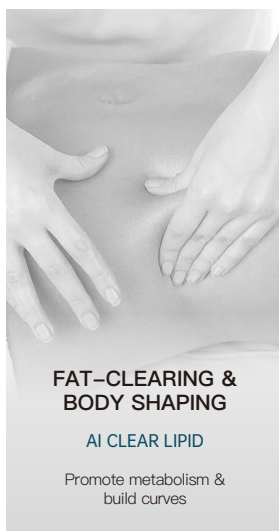

03

The intelligent temperature control system monitors the moxibustion temperature 10 times per second in real time. When the temperature is above 56°C, it automatically reduces the temperature to prevent low-temperature burns.

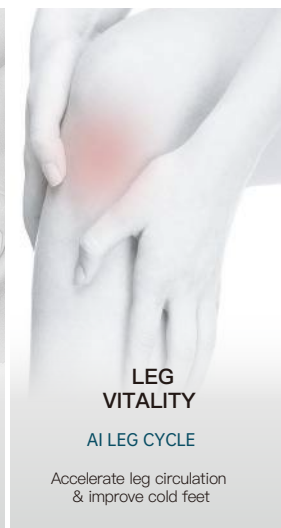

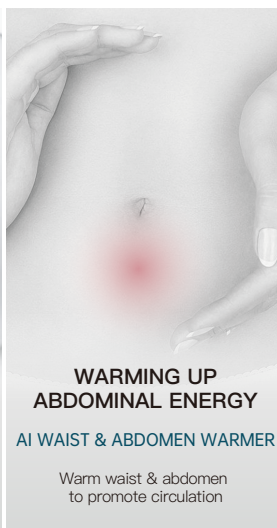

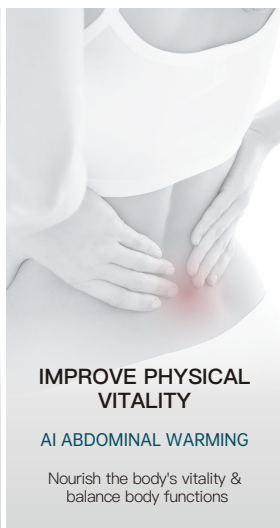

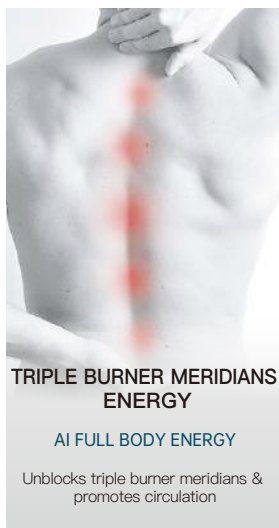

K-SHOCKWE SWELLING CARE

C-THERMALWE COLD & DAMPNESS CARE

MOXIBUSTION COLDNESS CARE

CORE TECHNOLOGY ACE HIT

100000000 TIMES

100 Million Sales In One Year

K-SHOCKWE

20 minutes of physical therapy is equivalent to 3 hours of massage, relaxing and placing it in the crevices of the bones

C-THERMALWE

20 minutes of physical therapy can last up to 2–8 hours to drive away dampness, coldness, and warmth into the body

MOXIBUSTION

Cold-dispelling management tool

*Data is provided by nearly 100 machines nationwide for a total of one year

XLIJA ACCELERATES THE HEALTHCARE INDUSTRY TO ENTER INDUSTRY 5.0

Intelligent Era

AI Digital Era

Ecological Era

Cutting-edge functional physiotherapy robots have entered the blue ocean market with first-mover advantage. The cutting-edge cooperation model is replicable and helps millions of health care institutions in China achieve intelligent upgrades.

With the aging population, people born after 1985 are about to turn 40, and high-quality sub-healthy people are starting to enter the market. The number of sub-healthy people is increasing every year, and the health management industry has huge room for future development.

Compared with the traditional beauty industry, AI intelligent robot therapy shops have the characteristics of being replicable, standardized, effective and with high repurchase rates. Investors only need to choose and, with the help of the headquarters, they can get stable returns.

With 16 years of professional operation team experience, whole store output, and years of digital cultivation, we have built a new generation of digital stores

A closed-loop enterprise developing an intelligent industrial chain, specializing in the production of physiotherapy robots, deployment of physiotherapy robots, operation of physiotherapy robots, online global traffic support, and offline premium service channel delivery.

Intelligent robot operation and development closed-loop enterprise, from customer reservation – consumption payment – store service – service evaluation – store account sharing – consumables distribution – logistics delivery to achieve digital management of front-end, middle-end and back-end

BRAND SUPPORT

Efficient Operations

We have unified pricing, delivery, and after-sales service nationwide. We use digital tools to optimize processes, reduce costs, improve efficiency, and achieve high-quality resource utilization and rapid response.

Data Empowerment

Relying on intelligent analysis to drive decision-making, precise marketing, and personalized services, we help boost business growth and upgrade user experience.

Millions Of Traffic

A powerful public and private domain system covers customers and users, creating a closer relationship with users, acquiring customers through multiple touchpoints, and directing

Long-term Win-win

Simple, efficient, and mutually respectful corporate culture, we will win the future of millions of sales with our partners

Digital Platform System

Healthcare equipment is intelligent, automated, and functional, reshaping the user's health management experience, enabling digital operations and easy management.

Educational Support

Systematic training service system, free quarterly advanced training, six major course systems and ecological teaching
